

DEXPI

- the Entry into Asset Lifecycle Information Management

Open Industry 4.0 Alliance
Knowledge Camp
February, 28th 2024

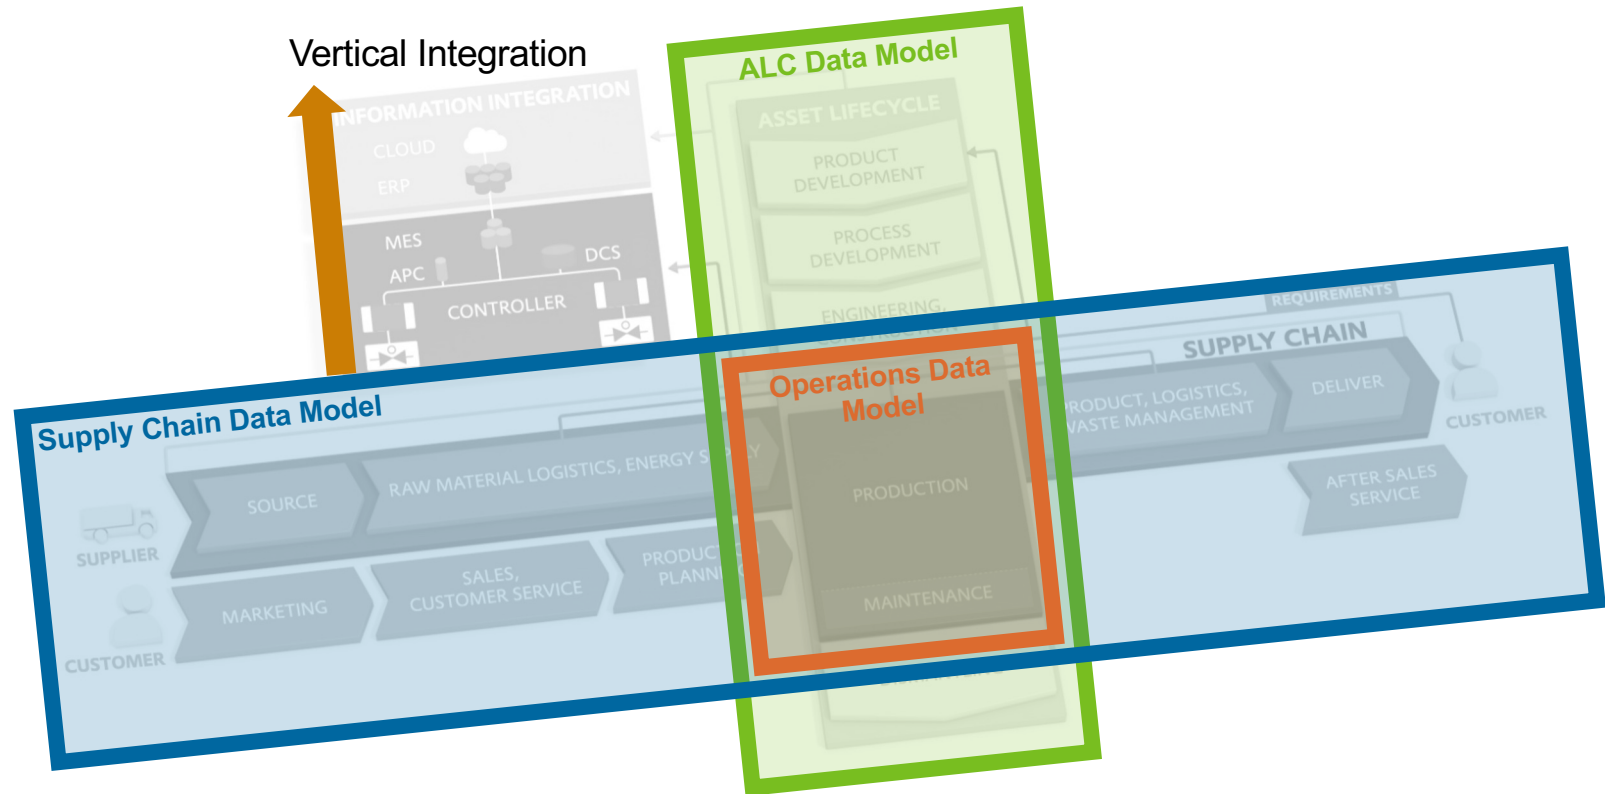

Wilhelm Otten, member of DEXPI board, head
of networking team

Asset lifecycle information management

Content:

- 1. Integrated Engineering Process**
2. Asset Lifecycle Information Model
3. The white spot "Process Model" – DEXPI+
4. Global initiatives and alignment

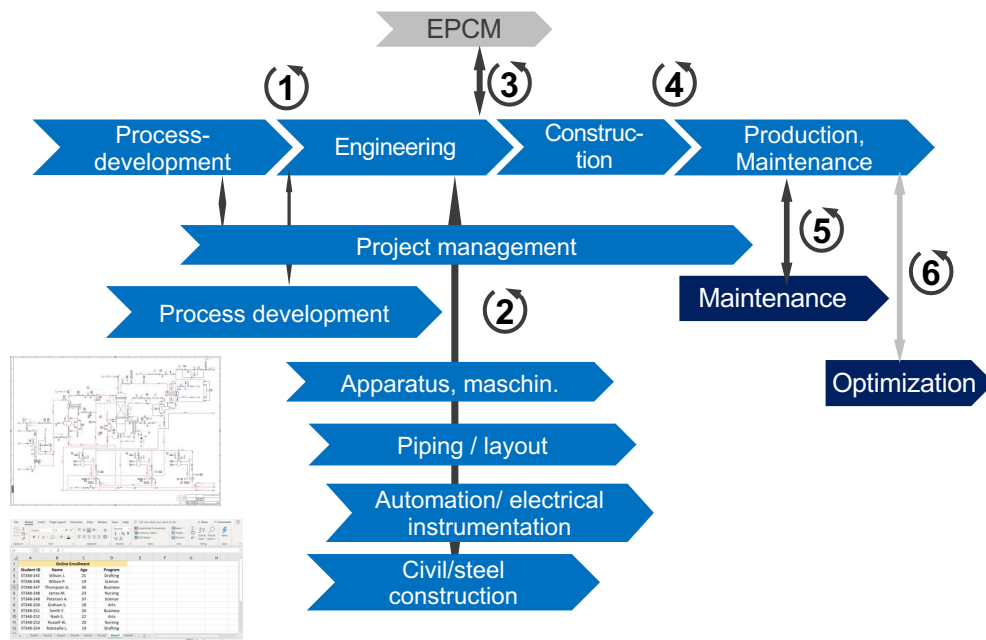

Data Models have to be related to Business Processes

* MTP is an operational model

Current engineering process and tool landscape are scattered due to phase/discipline and drawing orientation

Asset Lifecycle

Interfaces and handover along the Asset Lifecycle

- Invest and Fix Cost reduction based on more efficient planning processes using a holistic Asset Lifecycle Data and Document Management:

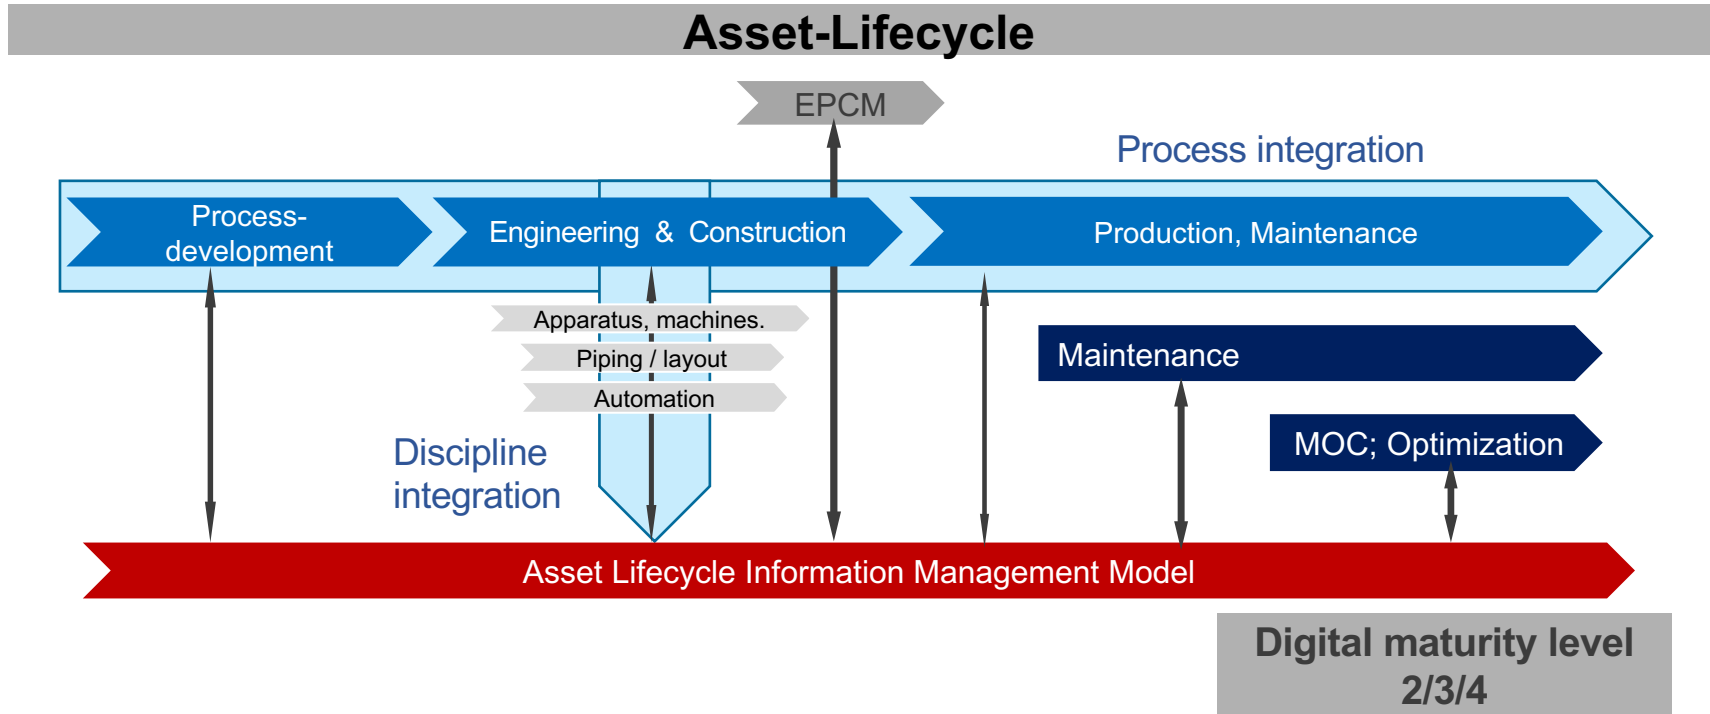

- ① – Handover from simulation to CAE
- ② – Data exchange across disciplines
- ③ – Date exchange with third parties based on data model
- ④ – handover to production
- ⑤ – maintenance management
- ⑥ – No consistent data update during optimization projects

Digital maturity level 0/1

Integrated Engineering provides better quality, speed and efficiency in investment projects, plant engineering and maintenance

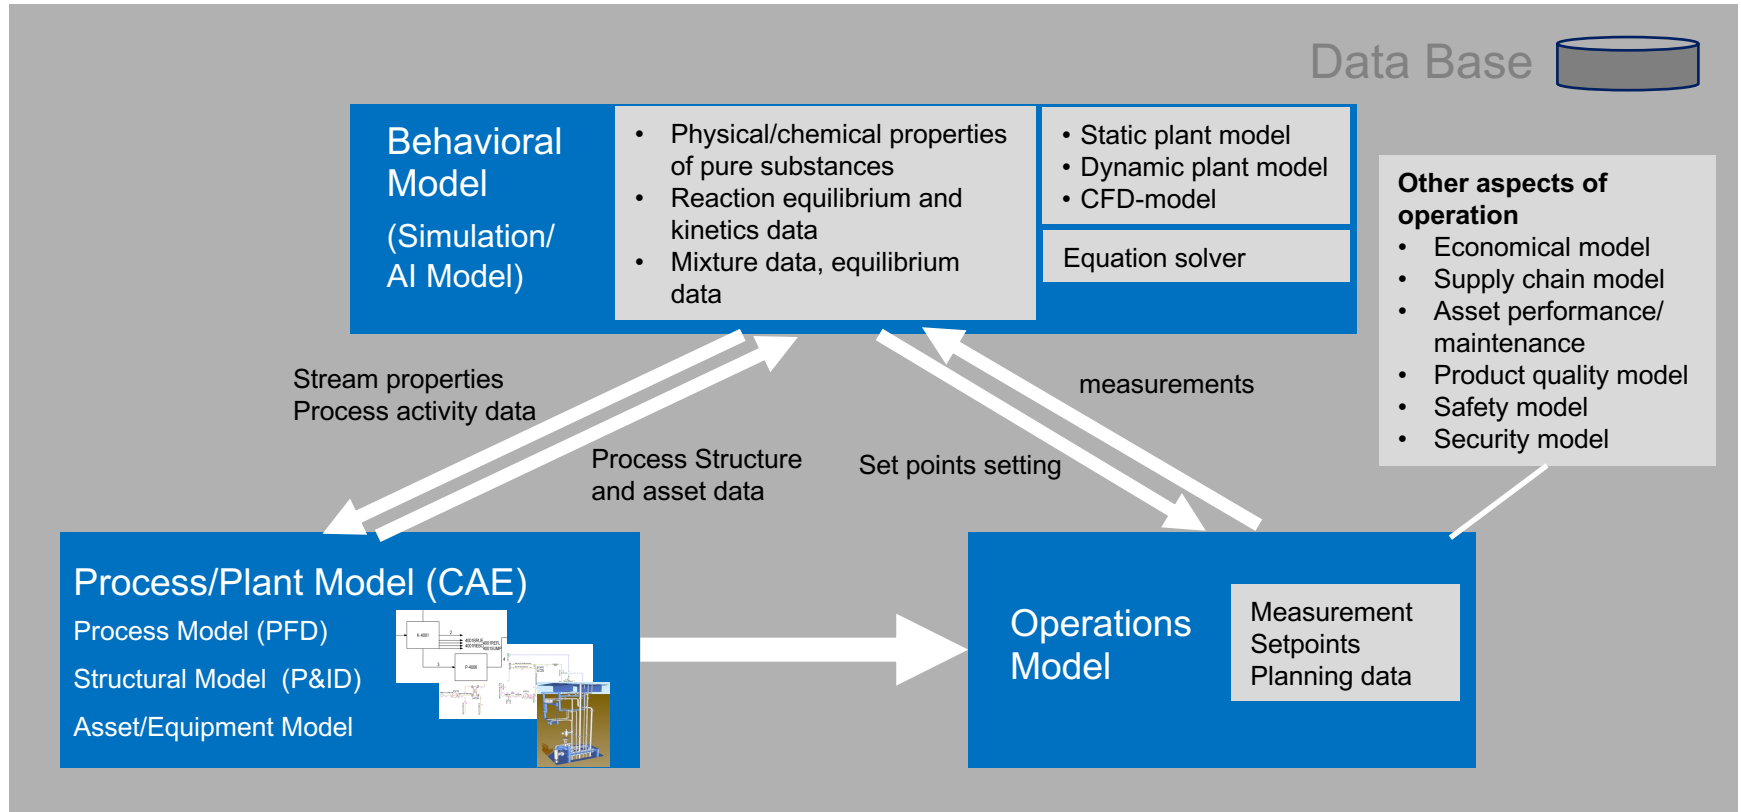

Integration along the process and across the disciplines by using one single Asset Lifecycle Data Management System

What is the digital twin for process industry?

Information model in process industry

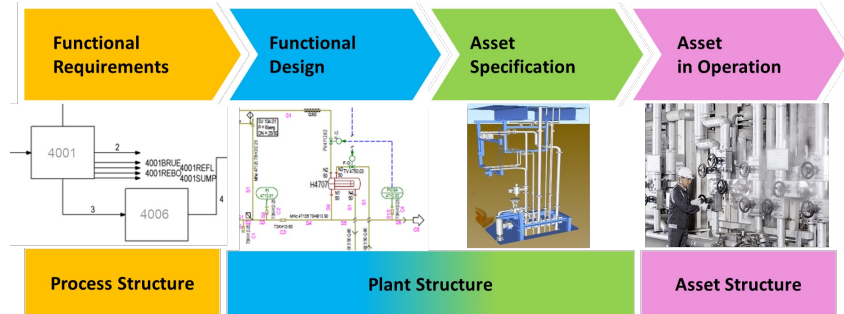

Asset lifecycle information management

Content:

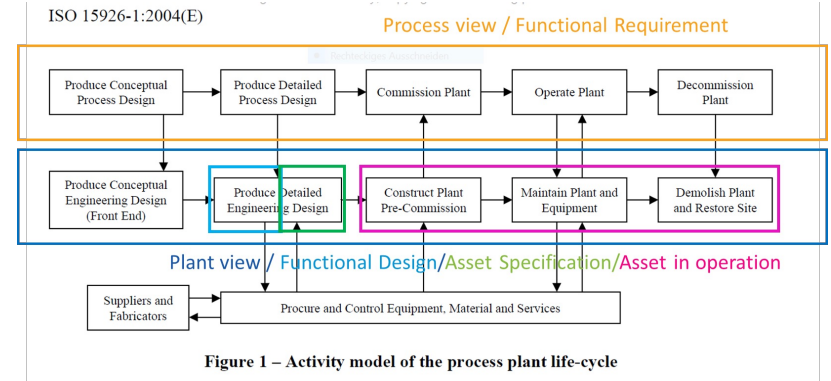

1. Integrated Engineering Process
- 2. Asset Lifecycle Information Model**
3. The white spot "Process Model" – DEXPI+
4. Global initiatives and alignment

International associations gained a common view on lifecycle model

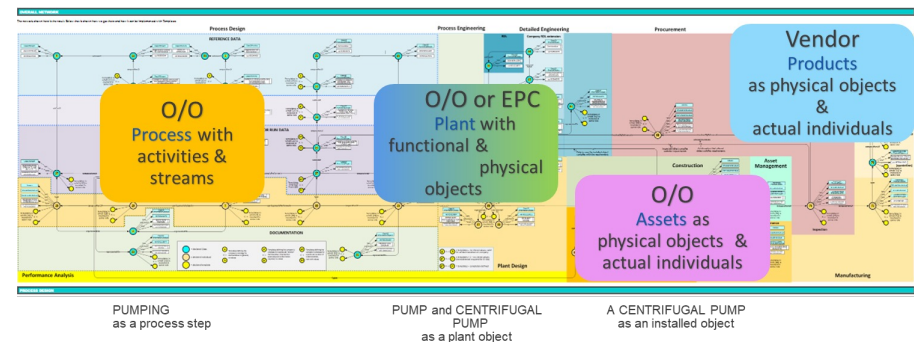

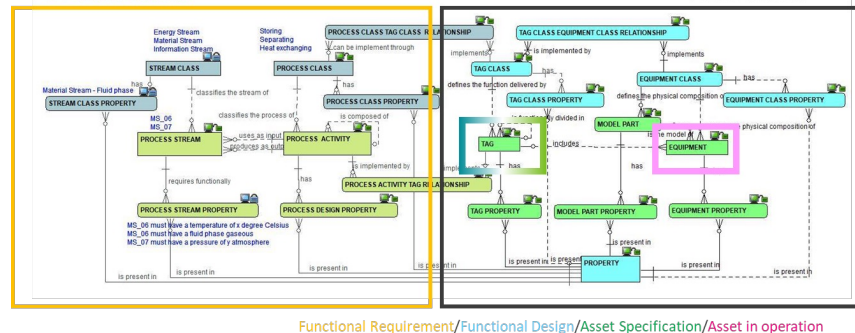

DEXPI and ENPRO lifecycle model

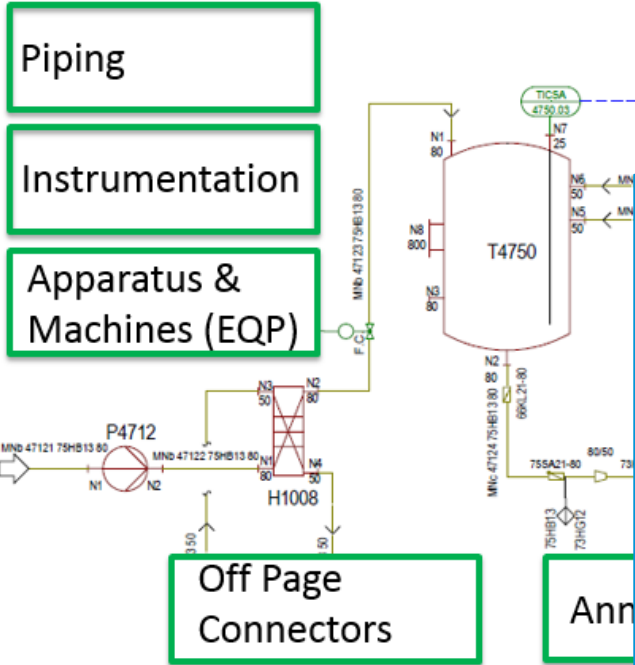

ISO 15926 lifecycle model

CFIHOS lifecycle model

DEXPI - General exchange standard for the P&ID in the process industry based on ISO 15926

The DEXPI Working Group

Software Vendors

- Aucotec
- Autodesk
- Aveva
- Bilfinger
- Cadmatic
- Element
- Eurocon
- Hexagon
- Industrial Analytics
- ITandFactory
- PTC
- pnb plants & bytes
- Semantum
- Siemens
- Sirfull
- X-Visual

Owner / Operators

- BASF
- Bayer
- Covestro
- Equinor
- Evonik
- Merck
- Wacker

EPCs

- ThyssenKrupp
- Yokogawa
- Aibel

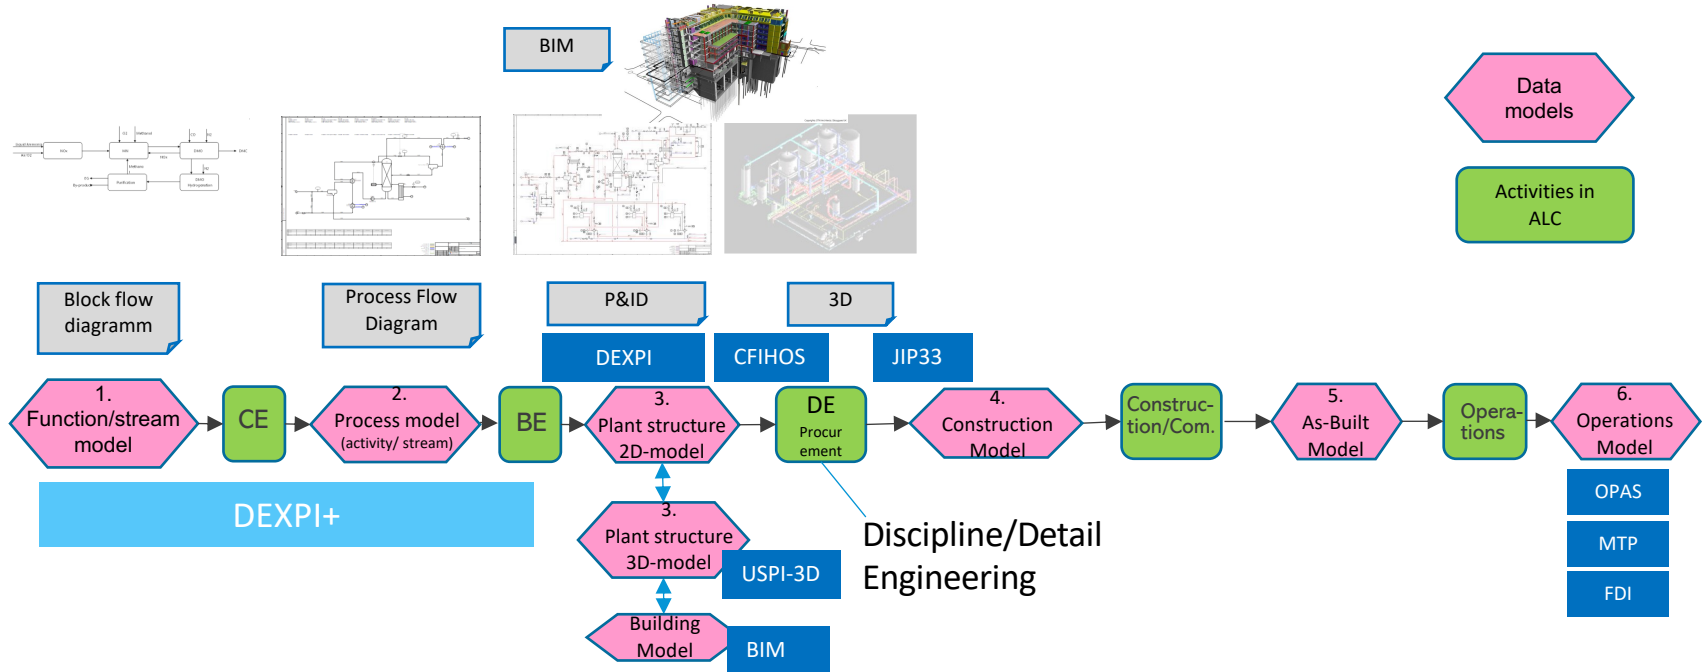

Research Organizations

- A* Star Singapore
- AixCAPE e.V.
- VTT of Finland
- TU Berlin
- TU Dortmund
- RWTH Aachen University
- Tecgraf/PUC-Rio
- Korea University
- University of Oslo / SIRIUS

Integrated Engineering along the Asset Lifecycle Process and Data Models

Asset Life Cycle (ALC)

One integrated data/information model and CAE-landscape using a common data model

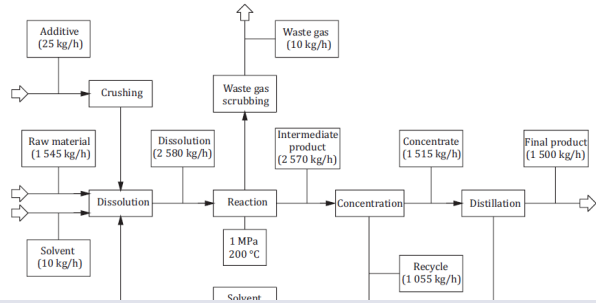

Asset lifecycle information management

Content:

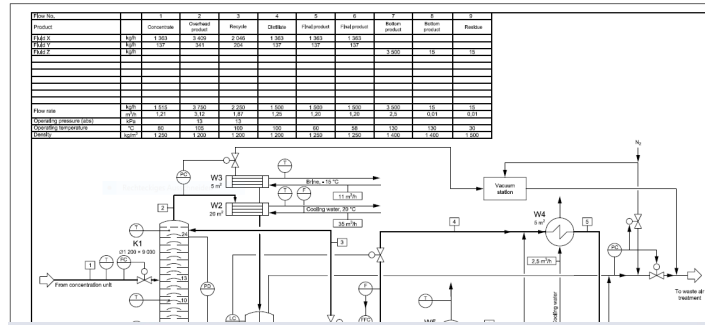

1. Integrated Engineering Process
2. Asset Lifecycle Information Model
3. **The white spot "Process Model" – DEXPI+**
4. Global initiatives and alignment

DEXPI+ covers BFD/PFD Information

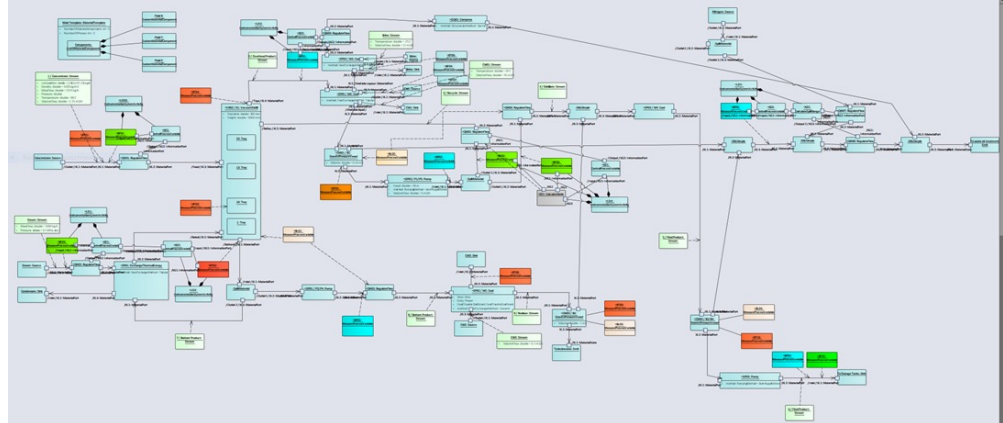

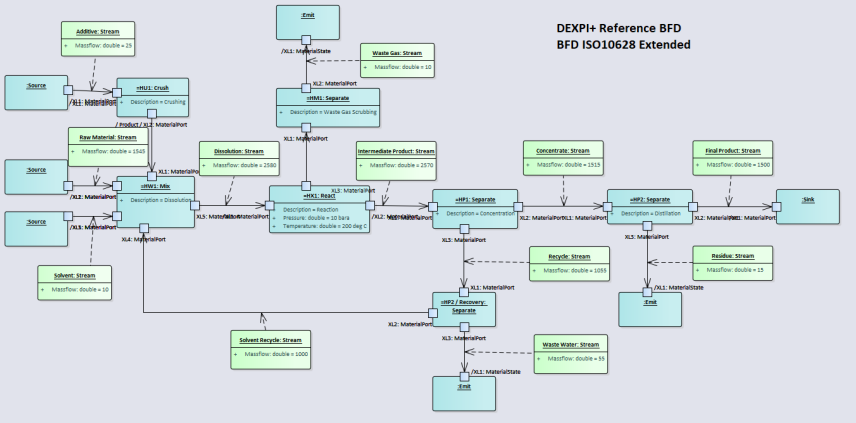

UML Model for BFD Iso 10628

PFD Iso 10628 extended

DEXPI+ Reference BFD ISO10628 Extended

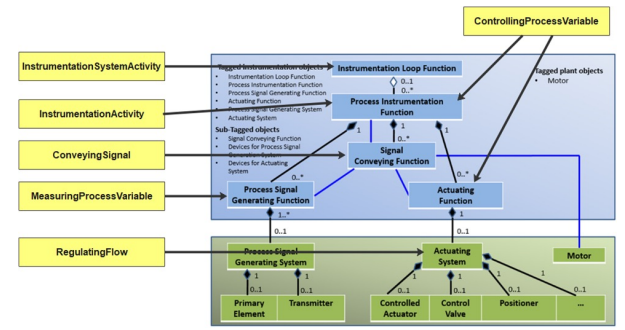

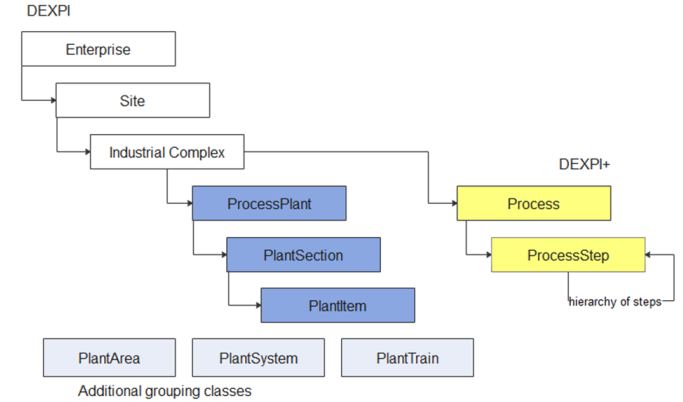

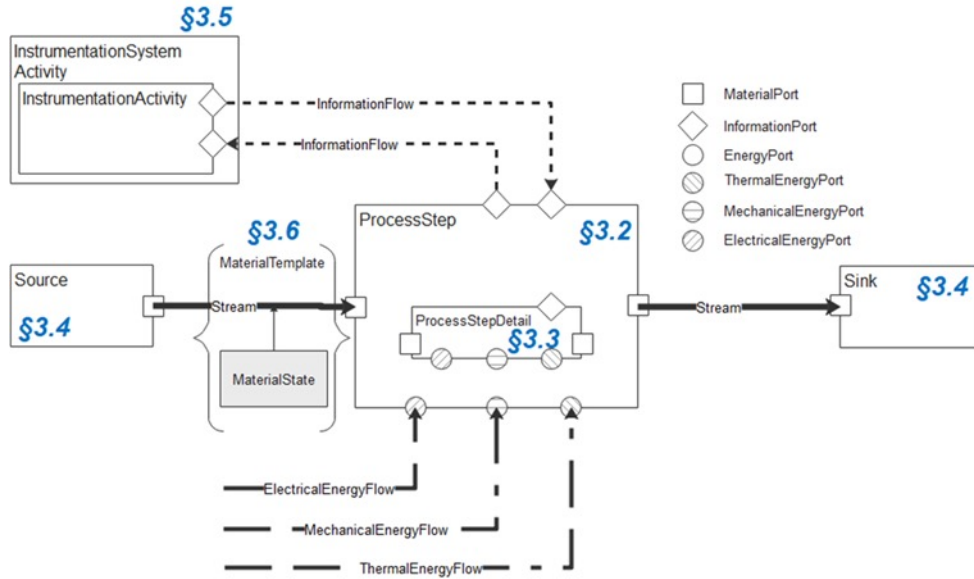

DEXPI+ provides an open industrial standard for a BFD/PFD Data Model

Data Model consist of:

- Metadata
- Process Step/Activities according ISO15926 part 4
- Stream model
- Instrumentation process activities

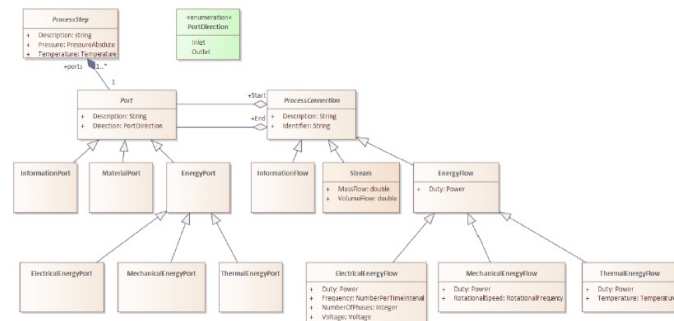

DEXPI+ Open Standard Version 1.0 is available on DEXPI-Homepage www.dexpi.org

DEXPI+ Modelling of Process Systems and their supporting diagrams – Version 1.0

Contents

1	Introduction: Modelling of Process Block and Process Flow Diagrams	5
2	Reference Diagrams.....	6
2.1	Overview	6
2.2	Reference Block Flow Diagram from ISO10628	6
2.3	Reference Process Flow Diagrams from ISO10628.....	6
2.3.1	Simple Process Flow Diagram	7
2.3.2	Detailed Process Flow Diagram.....	8
2.4	DEXPI Reference PFD	8
3	Building the Information Model: Process Systems and Activities.....	10
3.1	Overview: Modelling the Process	10
3.2	Hierarchy of Process Steps.....	10
3.3	Representation of Systems	10

NE 192

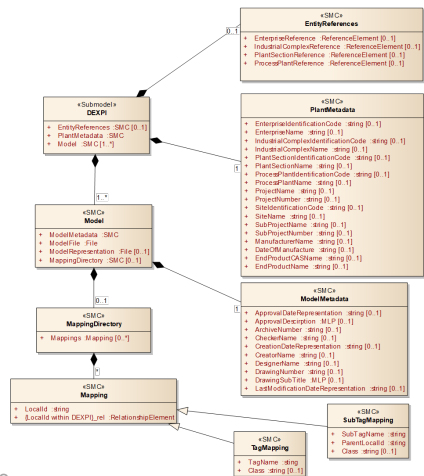

BIM?

DEXPI has been implemented as submodel of AAS

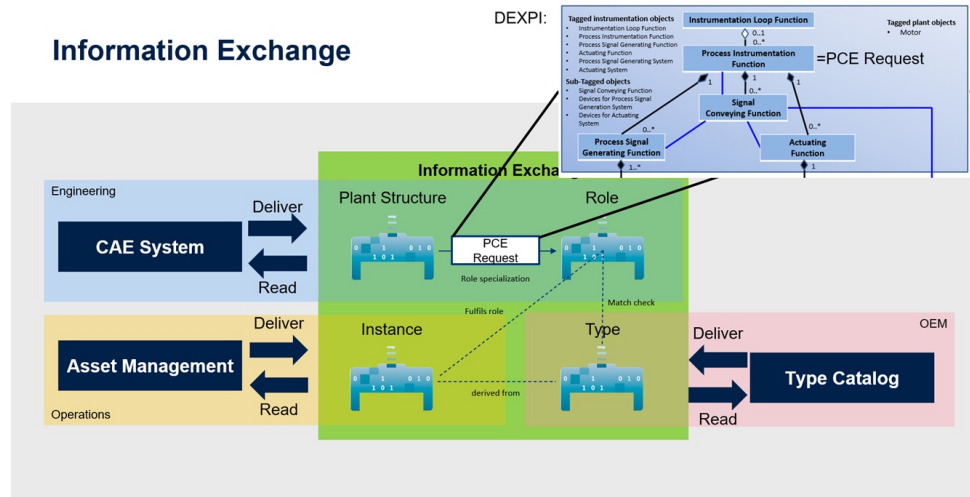

Use Case 1: Handover of DEXPI Models for P&D Diagrams

- Challenge is how to specify the identity of the P&ID and the asset it is referring to

Use Case 2 Using plant model (P&ID) to specify roles/ requirements for all assets

Information Exchange

20 NAMUR onboarding into Industry 4.0 – March 19th 2023

Main areas of alignment and follow up planning

Areas and actions

O/O

Process with
activities &
streams

- DEXPI+ (Process Model)
 - Integrate feedback on DEXPI+ 1.0 Standard
 - Develop a DEXPI 2.0 standard integrating process model (DEXPI+) and plant model (DEXPI 1.4)
 - Establish DEXPI 2.0 as process/plant model in the AAS;

O/O or EPC

Plant
with functional &
physical objects

- DEXPI (Plant Model) and Asset Lifecycle Model alignment with other initiatives
 - Align Automation Engineering requirements with DEXPI/DEXPI+; NAMUR working group
 - Contribute to CFIHOS RDL working group and to ISO15926 Part 14 project MRAIL
 - USPI project “Tagging” and “FL3DMS”

O/O

Asset as
physical object &
actual individual

- Alignment on content (attributes, specification)
 - Relevant associations – initiate working groups:
 - JIP33, CFIHOS, ECLASS, IEC (61987/CDD), VDMA, ISO15926 (only classes), ISO 15926 part 14, NAMUR; BIM
 - Areas of alignment:
 - Apparatus/Machines/Piping
 - Automation/Instrumentation
 - Electrical Equipment

Vendor

Product
as physical object &
actual individual
